

DataSnipper Platform v4.1

Improve the speed and quality of your audit procedures

Table Snip Suggestions

No need to drag and draw rectangles to snip tables. When you import documents that contain tables, DataSnipper now automatically provides suggestions to Table Snip. With a single click of a button, the tables are extracted into your Excel workbook.

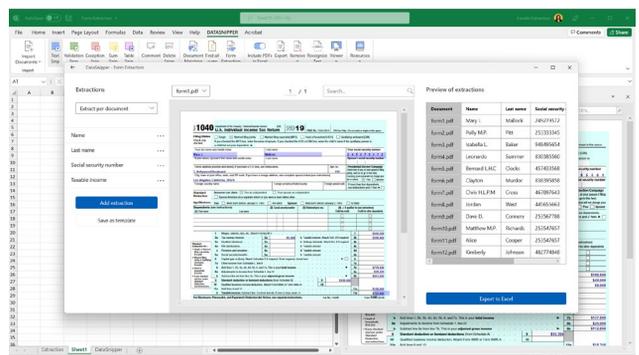

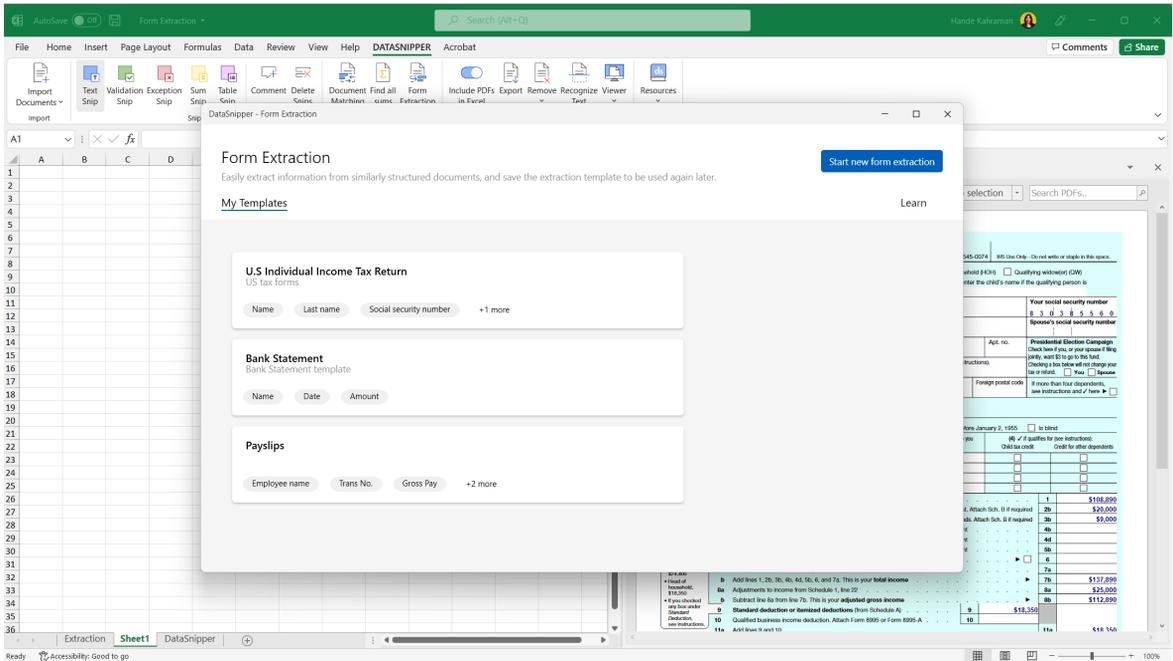

Metrics Dashboard

You can now choose a specific time frame to analyze DataSnipper usage metrics on the Metrics Dashboard. The metrics help managers to understand the adoption rates, keep track of audit teams' performance, pinpoint areas to improve and measure the impact of DataSnipper.

Form Extraction

The new user interface allows users to easily navigate and use Form Extraction. When you start a new extraction, you can now select or import the documents you would like to use. Additionally, you can edit extraction keys by using the snipping feature.

Saving templates in Form Extraction

It is now possible to save the extractions you created as templates in Form Extraction.

- Once you create a new form extraction, DataSnipper will give you the option to save it as a template for future use.
- The templates will save you time when you need to extract multiple data from same structured documents again.
- By importing the new documents to your saved template, DataSnipper will automatically extract the data for you.
- You can easily structure your templates folder by giving the template a title and a description.

Featured Templates

To save you more time, DataSnipper put together a variety of featured templates based on the most commonly used forms. The standardized templates decrease your manual work while increasing efficiency.

Company Templates

Sharing is caring. Your individual saved templates can be shared across your organization, ready to be used by everyone. Your colleagues can automatically run Form Extraction by simply importing their documents.
