

Financial Statement Suite v6

Accelerate your financial statement
procedures with next-gen tick & tie

Financial Statement Suite is a separate platform module

Built in Calculator

Quickly verify numbers and spot errors on your financial statements. Next to the auto-sum function, users can add, subtract, multiply, divide, and check for the % deviation between the two numbers.

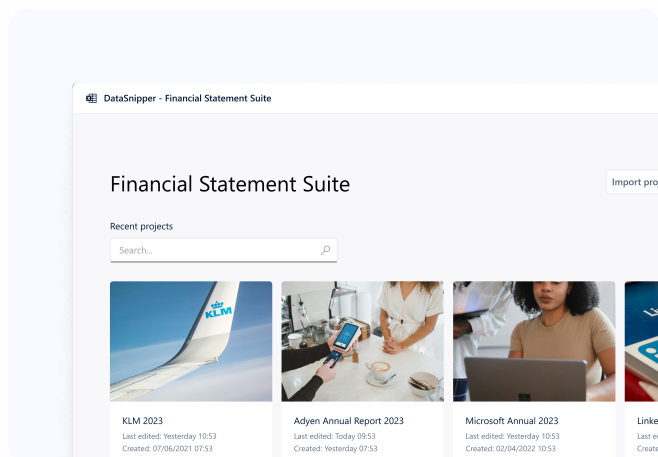

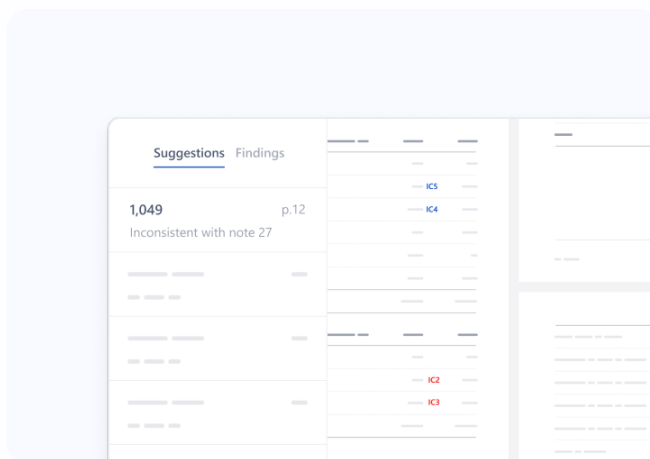

Applying tickmarks

For a more tailored experience, you can now view detailed tickmark information in a pop-up window. You can choose what tickmark to apply as well as leave a comment before the tickmark is placed

Improved Internal Consistency

With improved algorithms, Internal Consistency checks are now more accurate. The Financial Statement Suite provides deeper assurance in the checks and balances conducted automatically by the platform.

New Homepage

The Financial Statement Suite offers a new simplified and efficient homepage, centralizing all FSS engagements in one location and eliminating the need for separate files for each Financial Statement review.
